

Three Monthly Forecast

April– June 2010

Issued on 30 March 2010

Meteorological Department

General Condition

In April, heat low pressure cell will dominate upper Thailand, resulting in hot weather with very hot in many areas mainly in northern, northeastern, upper central and eastern parts. However, thundershowers and thunderstorms usually experience in upper Thailand in some periods. **May** is the transition period from summer to rainy season. During the first half of the month, hot weather and isolated thundershower. Then increasing in rainfall because of the low pressure trough will lie across central and eastern parts of Thailand, accompanying the southwest monsoon will prevail over Thailand and the Gulf of Thailand. Isolated heavy falls in some periods. For southern part, widely scattered to scattered thundershowers with isolated heavy falls especially in the west coast. **In June**, the low pressure trough will lie across northern and northeastern parts of Thailand in the first half of June and give rise to abundant rainfall over Thailand. After shifting northward to lie across southern China from the second half of June, resulting in increasing in rainfall over Thailand.

Warning :

April to the first half of May - The possibility of the occurrences of thunderstorms with gust and hail are high. So people should beware of natural disaster and should follow the weather forecast for further information.

The end of April to May - The low pressure cell in the Andaman Sea that sometimes strengthen to be tropical cyclone may have some effects on Thailand's rainfall especially in northern, central and southern Thailand.

June –The amount of rainfall will be not enough to consume and use for agricultural activities and the drought condition will occur in some areas mainly in upper Thailand.
