

Three Monthly Forecast

June– August 2010

Issued on 26 May 2010

Meteorological Department

General Condition

In June, the low pressure trough will lie across northern and northeastern parts of Thailand during the first half of the month and give rise to abundant rainfall over Thailand. After shifting northward to lie across southern China from the second half of June to the first half of **July**, rainfall amount will decreasing over Thailand. From mid July to August, the low pressure trough move back to lie across northern, northeastern and central parts of Thailand and the southwest monsoon prominently prevail over Thailand and the Gulf of Thailand most of period. Abundant rainfall over Thailand again.

Warning :

June and July –The amount of rainfall will be not enough to consume and use for agricultural activities and drought condition will occur in some areas mainly in upper Thailand.

– The tropical cyclone generating in the Western North Pacific Ocean or South China Sea may induce the strength of southwest monsoon and cause increasing in rainfall especially in eastern and southern Thailand.

August - There is high probability that the tropical cyclones in the Western North Pacific Ocean move near or pass through northeastern or northern Thailand. Therefore, people should continually follow the weather news.
